smartdeploy

Windows Migration | PC Refresh | New Hardware

FAST AND RELIABLE WINDOWS DEPLOYMENT

Simplified Windows OS and Application Deployment

SmartDeploy is Windows® operating system and application deployment software that allows you to deploy a single image to any device in your organization.

SmartDeploy reduces the risks and improves the reliability of Windows migration and deployment projects—from Windows OS upgrades to immediate break-fix. With its flexible design, SmartDeploy works within the demands of your IT infrastructure with minimal training, setup, or ramp-up time.

Single Image Management

Streamline your image library and seamlessly deploy one image to any device.

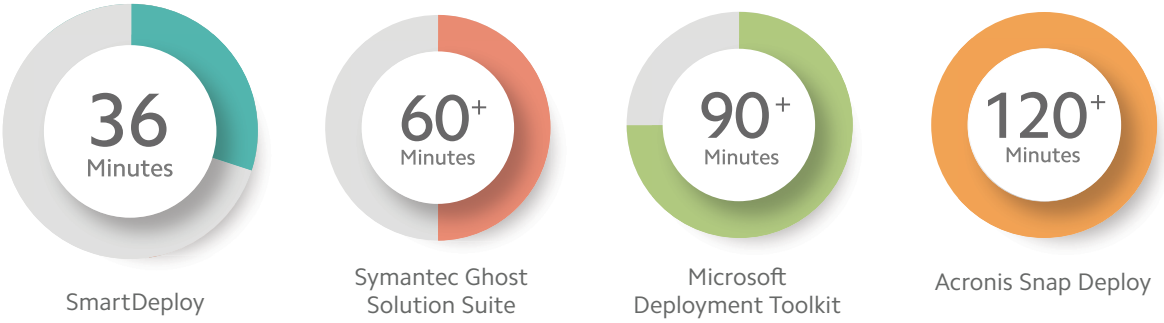
Built-in Best Practices

Simple wizards and logical packages make setup time fast and easy.

We Manage Drivers

Focus on the software you want to deploy, not the hardware you support.

SmartDeploy vs. Competition



Results are based on common IT deployment tasks including image capture, driver acquisition and packaging, and image deployment to an endpoint device.
Data provided by Passmark Software

"It used to take two to three weeks to get a new computer on a user's desk. Now, using SmartDeploy, users at our central office who order a PC by 10 a.m. can have a fully configured on their desk by 3 p.m. that same day."

Save Time - Save Money

Innovative features reduce the technical complexity of deployment and increase IT productivity and corporate security. By helping you work more efficiently, SmartDeploy reduces direct and indirect costs associated with traditional deployment solutions. SmartDeploy makes the most of your environment – from staff and administration to hardware and network resources.

SmartDeploy allows users to:

- Independently manage hardware and software packages
- Deploy to thousands of machines with a single toolset
- Reduce your library to a single image that can be used on any device
- Eliminate reference computer inventory by using a virtual machine as a reference computer
- End driver problems with downloadable, pre-built device driver packages
- Simplify management by eliminating deployment-specific infrastructure and hardware
- Reduce storage by an average of 80 percent or more[2]
- Reduce deployment-associated labor by 50 percent or more

[2] Based on user reports.

> "I've been able to use the same image on disparate hardware with zero problems; Dell Precision T3600 and M6300, XPS 12 and 15, HP Pro 3000. SmartDeploy did this seamlessly and paid for itself many times over."
>

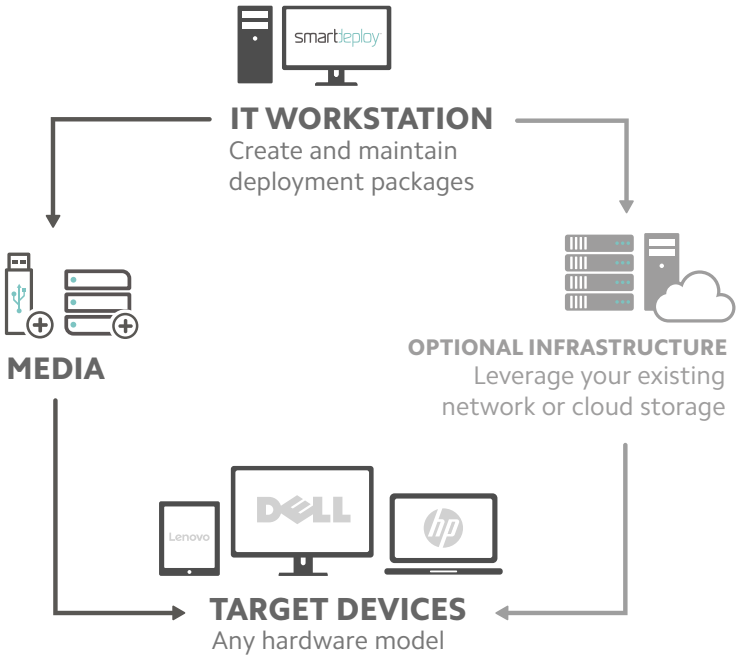
Architecture Overview

Leverage an existing IT Workstation to build and manage all components of the deployment package. Additional hardware or resources are not needed to use SmartDeploy.

You can then deploy directly to any target device. Leverage the power of your network, storage, or IT management products for increased functionality.



To learn how SmartDeploy can fit within your organization, contact a product specialist at sales@smartdeploy.com or call us at 888-7DEPLOY.
